Interest Announcement for  
Fish Biologist  
GS-0482-12/13

## Bureau of Land Management Washington, D.C.

The Bureau of Land Management (BLM) administers lands that directly affect over 3 million acres of lakes and reservoirs and 117,000 miles of fish-bearing streams. Water bodies on BLM-administered lands are diverse, ranging from isolated desert springs populated with rare endemic species to large Columbia River tributaries with important habitat for Pacific salmon and steelhead. BLM waters also support subsistence fisheries that sustain Native American cultural heritages, as well as nationally significant recreational fisheries such as Gunnison Gorge, Lake Havasu and the Rogue River.

### Position Responsibilities:

- Provides policy and guidance to BLM State and Field Offices in support of the Fisheries Program.
- Provides support for various Initiatives such as Healthy Landscapes, Climate Change, and Renewable Energy.
- Provides BLM guidance for National Fish Habitat Action Plan, Aquatic Nuisance Species Task Force, and the Federal Fish Passage Steering Committee.
- Reviews legislation and regulations that influence fish management on BLM-administered lands.
- Maintains liaison with other governmental agencies and various fish conservation and sportsman's organizations at the national, regional, and state levels.
